Summary

Data Analyst with a strong engineering background and more than four years of experience with product systems at Ozon, Yandex, and Sber. I work confidently with Python, SQL, data marts, and large-scale data. I understand the data path from source to analytics, can investigate product metrics, identify bottlenecks, and automate calculations. I am considering Data Analyst and Product Analyst positions.

Work Experience

August 2026 June 2026	Ozon.ru — Go Developer - Developed backend services and integrations for an e-commerce platform, working with event streams, storage systems, metrics, and logs - Stack: Go, Python, Kafka, Elasticsearch, PostgreSQL, Redis, K8s, Kibana, Grafana
May 2026 September 2024	Yandex Plus — Frontend Developer - Implemented plan and option upsell on the main payment screen, increasing add-on sales by 1% - Implemented post-payment onboarding, increasing user engagement by 5% - Added promo campaign change history and improved subscription payment and activation flows - Stack: TypeScript, React, Next.js, XState, Redux, Playwright, Node.js
September 2024 February 2024	Arenadata (Picodata) — Rust Developer - Developed and optimized Ansible workflows for reproducible deployment of distributed applications - Migrated automated tests from Lua to Rust, reducing execution time by 10% and unifying development and testing on a single language - Stack: Rust, Tarantool, Kafka, Lua, Ansible
September 2023 August 2022	Sberbank — Data Analyst - Developed data marts and calculations for a related-borrower group product, aggregated credit exposure, and analyzed limit utilization and group composition - Controlled borrower relationship data quality, identified duplicates and discrepancies across sources, and optimized SQL calculations on large datasets - Stack: SQL, Python, Hadoop, Hive, Spark, Greenplum, ClickHouse
August 2022 July 2021	Yandex Go — C++ Backend Developer - Migrated databases for new business entities and added driver achievement progress tracking, increasing visits to the achievements tab by 45% - Implemented caching and bulk API endpoints, increasing maximum throughput by 10x without significantly reducing data freshness - Stack: C++, Python, PostgreSQL, MongoDB, Elasticsearch, Kibana

Skills

Data analysis	SQL, Python, Pandas, NumPy, Statsmodels
Visualization	DataLens, Matplotlib, Grafana, Kibana
Data platforms	ClickHouse, PostgreSQL, Greenplum, Hadoop, Hive, Spark, Kafka
Analytics	data marts, data quality, product metrics, SQL optimization
Development	Go, TypeScript, React, Java, Rust, C++
Tools	Git, Docker, K8s, Ansible, Playwright

Education

2019 – 2023	MIPT — Bachelor's degree in Applied Mathematics and Computer Science
2023 – 2025	MIPT — Master's degree in Applied Mathematics and Computer Science
2023 – 2025	YSDA — Data Analysis
